

AMSTERDAM CHURCHILL COUNTY

SEWER DISTRICT NO. 307

7200 Churchill Road, Manhattan, MT 59741
406-282-7291

November 27, 2013

Dear Sewer System Customer;

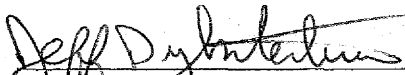

The Sewer District is moving forward with plans to comply with the terms of the States Department of Environmental Quality (DEQ) Administrative Order, addressing the deficiencies at the wastewater treatment lagoons. The District will be constructing a wastewater conveyance system which will pump raw wastewater to the Town of Manhattan for wastewater treatment and disposal. The construction of this project is scheduled for the summer of 2014.

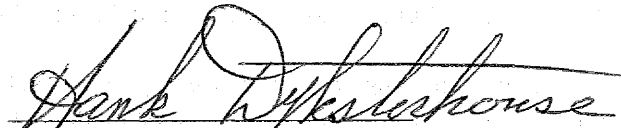

As our community grows, the District would like to be pro-active and start planning now. The current terms of the agreement with the Town of Manhattan, allows for approximately 20% grow within our Community. Once we near our growth limit, the District will have to purchase additional treatment capacity at the Town's wastewater treatment facility. In planning for the future, the District is proposing to charge new customers a System Development Fee to help fund future wastewater treatment capacity.

The System Development Fees will apply to new customers only having no impact to existing customers. The system development fees will be structured as stated in the enclosed notice. The system development fees will be placed in an account and will be used to purchase additional wastewater treatment capacity when it is necessary.

Please review the enclosed notice and feel free to contact myself or any of the Board Members with questions or comments.

Sincerely,
Amsterdam-Churchill Sewer District

Jeff Dyksterhouse, Manager
